

Diflucan Partnership

Pfizer Investments in Health

TREAT

Providing Diflucan® to governments and organizations to treat patients with two AIDS-related opportunistic fungal infections

TEACH

Distributing materials to train healthcare workers on the diagnosis and treatment of AIDS-related infections

BUILD

Providing inventory management training tools for pharmacists to improve medicine handling and distribution

SERVE

Sharing best practices and models for effective medicine distribution and supporting industry collaboration on access to medicines

This program has not only benefited patients with AIDS, but has also resulted in excellent additional training for our healthcare professionals.

*Dr. Manto Tshabalala
Msimang,
Minister of Health of South
Africa*

Overview:

Pfizer created the Diflucan® Partnership in 2000 to improve the quality of life for people living with HIV and AIDS. Pfizer and its partners distribute millions of Diflucan® (fluconazole) treatments for AIDS-related fungal infections free of charge to governmental and nongovernmental organizations in developing countries. Pfizer also provides materials to support patient education and healthcare worker training.

Goal:

To provide treatment for AIDS-related fungal infections in developing countries.

The Need:

Across the globe, only one in five people with HIV/AIDS receive the medicines they need. (UN Millennium Development Goals Report, 2006)

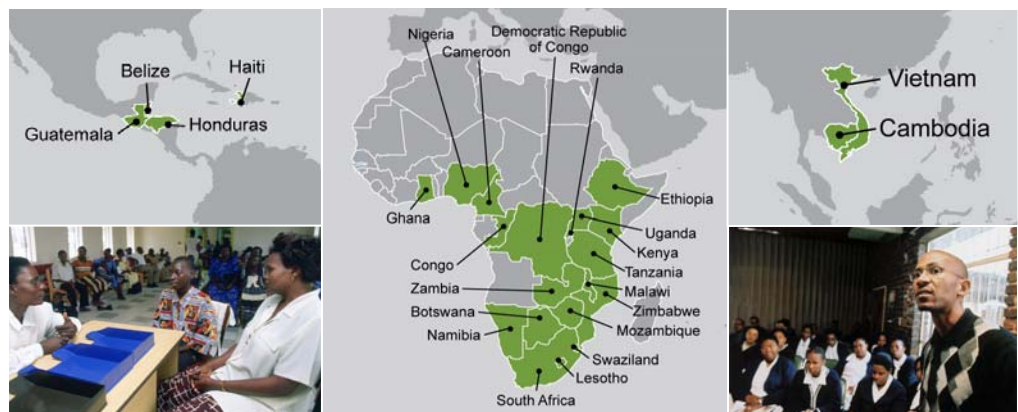

Partners:

Pfizer's partners provide technical assistance, support program management and distribute Diflucan to participating governments and organizations.

IMAWORLDHEALTH
ADVANCING HEALTH & HEALING THE WORLD OVER

Target Areas:

Results:

- Provided \$629 million in medicine since 2000 to more than 1,300 sites in 59 countries in Africa, Asia, the Caribbean and Latin America
- Provided training and education materials to 20,000 healthcare professionals to help improve patient care and medicine distribution
